

Bulk upload — Conversation labelling items

Upload a CSV with the following columns. Each row creates one conversation annotation item.

name

A name for the item.

transcript

A JSON array of chat messages representing the full conversation. Each message is an object with a "role" and "content" field.

role — either "user" or "assistant"

content — the message said by that role

created_at — (optional) ISO-8601 timestamp for when this turn happened

```
[
  {"role": "assistant", "content": "Hi, how can I help?", "created_at":
"2026-05-18T09:14:02Z"},
  {"role": "user", "content": "I lost my card"}
]
```

description

(optional) A description of this item. Shown to annotators alongside the evaluators while they label.
